Exam   :   **C90-05A**

Title   :   Advanced Cloud
                 Architecture

Version :   DEMO

1.The storage management portal is a portal that provides management features for

A.Vertically tiered cloud storage devices

B.Horizontally scaled cloud storage devices

C.Block-based storage devices

D.Alltypesof cloud storage devices

Answer: D

2.Which pattern can be applied to establish a failover system for cloud storage devices that enables continuous data access for cloud consumers?

A.Direct LUN Access

B.Redundant Storage

C.Storage Workload Management

D.Intra-Storage Device Vertical Tiering

Answer: B

3.The application of the Intra-Storage Device Vertical Tiering pattern establishes a system that optimizes the availability of different disk types of the same capacity.

A.True

B.False

Answer: B

4.Applying the Dynamic Failure Detection and Recovery pattern establishes a _____that can monitor and respond to runtime failure conditions.

A.Watchdog system

B.Capacityplanner system

C.Failover system C

D.Intelligent automation engine

Answer: A

5.After applying the _____pattern, a system is established in which a _____is used to provide virtual servers with direct access to LUNs.

A.Direct LUN Access, hypervisor

B.Redundant Storage, cloud storage device

C.Direct LUN Access, physical host bus adapter card

D.Redundant Storage, virtual switch

Answer: C
