Referring to the exhibit, a customer is experiencing performance problems on an SVM supporting NVMe/FC. You review the physical FC ports that are connected into the 32 Gbps switches for cluster tme-a700.
In this scenario, what is causing the performance problems?
A. Port 2b has two many LIFs running across the physical port.
B. Port 2b has a 16 Gbps SFP+ installed.
C. Port 2a needs more network interfaces added to the physical port.
D. Port 2a needs a 16 Gbps SFP+ installed.
Answer: B

4.Your company is merging with another company. You are asked to setup your AFFA 400 cluster to support two networks that have the same overlapping 192.168.1.0/ 24 subnet.
In this scenario, what must you create, to enable the same subnet with overlapping IPs on the same cluster?
A. broadcast domain
B. IPspace
C. subnet
D. failover group
Answer: B

5.Your customer has an NTFS volume that they want to access over both SMB and NFS. The client explains that SMB access works fine, but the clients are unable to NFS mount the volume.

What are three reasons that would cause this issue? (Choose three.)

A. There is no export-policy rule for the NFS clients.

B. The LIF data protocol does not allow NFS.

C. The volume security style must be changed to UNIX.

D. The NFS server is not configured.

E. Multi-protocol is not licensed on the cluster.
